

## Fertility Preservation for Cancer Patients

Wisconsin Fertility Institute (WFI) is proud to offer fertility preservation services to cancer patients undergoing treatment that will adversely affect their fertility. We work respectfully with patients and their families to provide this critical service in a private and supportive manner. We understand that time is of the essence and move quickly in cooperation with the patient and their oncology team. Our state of the art, on-site laboratory is able to freeze and store sperm, testicular tissue, oocytes and embryos. We do offer discounted rates for the preservation of fertility. For more information, please contact at 608-824-0075.

In addition, we know the cost of fertility medications can be a factor. MDR is a pharmaceutical company that works to help patients get the medications needed to ensure preservation. Should you choose to move forward the link provided will allow you to get the application process and checklist started <https://www.mdrusa.com/oncofertility/reunite-oncofertility/>
